**Industry awards and new Momentum integrated amp highlight D'Agostino LLC plans for 2014 International CES**

*New amplifier the latest in a line that recently received Stereophile Product of the Year in the Amplifiers category, Stereo Sound 2013 Grand Prix and a CES 2014 Innovations Design and Engineering award.*

CAVE CREEK, AZ, NOVEMBER 18, 2013 — At International CES, January 7-10, 2014, in **Venetian Hotel suite 29-223**, Dan D'Agostino Master Audio Systems will be debuting its new Momentum integrated amplifier and celebrating many recent honors from industry publications and organizations. The company invites and encourages CES attendees to visit the Venetian suite to audition its latest products.

The Momentum integrated amplifier brings many of the technologies from the Momentum amplifiers and preamplifier to a broader market. From the front, the integrated amp closely resembles with Momentum preamp, with the same illuminated indicator dial inspired by Swiss watches. Like the preamp, the integrated amp offers six balanced XLR inputs. It also continues the preamp's bypassable tone controls for bass and treble, so the sound can be adjusted to suit the recording, the room or the other equipment in the system, all without affecting fundamental audio quality and musicality.

Using the same essential design concepts as the original Momentum amplifiers, the Momentum integrated amp delivers 200 watts per channel into 8 ohms and 400 watts per channel into 4 ohms, both rated conservatively. Like the originals, the integrated draws less than 1 watt of power in standby mode, and employs 1% metal-film resistors, 69 MHz output transistors and through-hole construction for maximum fidelity and longevity.

Alongside the new Momentum integrated amp will be other products from the Dan D'Agostino Master Audio Systems line—including the original Momentum monoblock amplifier, recently named Product of the Year in the Amplifier category by *Stereophile* magazine, and the Momentum preamp, which was recently honored in the *Stereo Sound* 2013 Grand Prix and the CES 2014 Innovations Design and Engineering awards

“We’re immensely proud that the audio industry’s leading editors and reviewers have picked our products as best of the year,” Dan D’Agostino, president of Dan D’Agostino Master Audio Systems, said. “I hope and expect that they’ll find the new Momentum integrated amplifier lives up to the high standards we’ve set. With this product, we want to reach that wider audience that may not have the space or budget for separate components, but that still expects unparalleled performance.”

D’Agostino LLC will be producing the Momentum integrated amplifier, and all of its other products, in its new factory in Carefree, Arizona. The integrated amplifier is expected to ship in January 2014 at a price to be announced.

**ABOUT D'AGOSTINO LLC**

D'Agostino LLC was founded in 2010 by famed high-end audio designer Dan D'Agostino, former founder and Chief Engineer of Krell Industries. The company designs and builds high-end audio electronics in its Cave Creek, AZ facility. All products are built and tested by hand to the highest standards, and all incorporate innovative design and circuit topologies not seen in any other audio products.
